

# ORS-1075HS HUSH-SLUSH® System

## Automated Surgical Slush Machine

### **ORS-1075HS HUSH-SLUSH®**

Designed to significantly reduce noise in the operating room and produce a "Velvet Soft Slush", the **HUSH-SLUSH®** System helps to ensure patient safety in the O.R. The **AUTO-SLUSH®** feature automatically stirs the solution, saving valuable nursing time. Additionally, **AUTO-SLUSH®** prevents "Ice Ring" formation and reduces the likelihood of any large or sharp ice chunks being introduced into the patient.

**HUSH-SLUSH®** does not require an alcohol transfer medium or additional stainless steel basin, so set-up time is reduced. Surface mounted controls are in the sterile field to allow easy operation by the scrub nurse.

**HUSH-SLUSH®** technology allows nursing staff to deliver high quality slush safely and in a quiet manner.

### **ORS 2038D Irrigation Solution Warmer**

The optional solution warmer allows the surgical team to safely warm irrigation solution and comply with fluid manufacturer recommendations to store bottles at room temperature. The **ORS-2038D** rapidly warms and then maintains the solution at a known temperature throughout the surgical procedure. The digital controller clearly displays the actual solution temperature and set-point. Temperature can be easily changed by the scrub nurse to meet specific surgical requirements.

Warming irrigation solutions with the **ORS-2038D** assists hospitals in meeting manufacturers' recommendations and regulatory standards.

### **Slush Unit**

Power:	120 VAC; 12A; 60Hz
Refrigeration:	750 btu/hr
Temperature Range:	30°F to 32°F
Cooling:	Air
Dimensions:	Height 36", Width 18", Depth 18"
Electrostatic Filter	Yes

### **Warming Unit**

**Available individually, in a range of sizes**

Fuse:	(2) 3A Time delay
Temperature Range:	Room temp up to 120°F (49°C)

Capacity:	<b>Warming Unit:</b> 3.8 Liters
	<b>Slush Unit:</b> 7.5 Liters
